Piranha MSDS window stripper.pdf;

Good morning dear tenant,

I wanted to update you again on the upcoming schedule for buildings 10/11. Starting tomorrow, August 21<sup>st</sup>, our contractor will be doing hand detailed work on walls and window frames. We will start removing exterior windows barriers late next week. The double-layer of barrier plastic on the inside of the windows will remain in-place until the enclosure is approved for break-down. We will use a paint stripper to remove paint from the windows frames. I have attached the product data sheet of the stripper we are currently using for your information.

The exterior walls will be inspected and approved before enclosure break-down can begin. After all scaffolding has been removed; Rainier Commons will be spray applying a clear masonry sealer on all exposed exterior surfaces. This product is approved for use in "open air" environments. The sealant will be applied on a wind-free, rain-free weekend, to eliminate the possibility of overspray reaching the parking lot.

Now that all blasting operations have been completed, feel free to occupy your space as you usually would. The noise associated with our hand work is quite minimal.

We ask that you continue to keep up good house keeping practices in your space such as dusting with a damp cloth and regular vacuuming with a HEPA filtered vacuum.

Please let me know if you have any questions or concerns.

Thank you,

**Vered Mizrahi**
